This sequence represents an N-terminal transmist of hosen growth borneus (hGH) which is a component of a chimeric protein (AAV42661) which also contains a functional precursor (AAV42869). The hGH portion of the chimeric protein acts as an intramplementary character (TMC) for the chimeric protein acts as an intramplementary of acts and the chimeric protein to be removed after (Diding has taken place). Inker while a C-terminal Arg residue (AAV42867) unables the hGH portion of the chimeric protein to be removed after (Diding has taken place). Production of recombinant haman insulin with correctly linked cysteine bridges with fewer necessary procedural steps, and hence resulting in a bigher yield of human insulin with correctly linked cysteine bridges with human insulin. The IMC sequences not only protect insulin sequences from intracellular degradation by a microorganish host, but sequence the foliang of the fusion protein and decrease the intermolecular the fusion proteins thus allowing folding of the fusion proteins thus allowing folding of the fusion proteins, thus allowing folding of the fusion proteins, thus allowing folding of the fusion proteins, thus allowing folding of the fusion proteins and decrease the interminant steps of cyanogen bromide cleavage, exidently setting the profession and related purification steps and this here eliminated, along with the last of the content and the last of the last of the content and the last of the last of the content and the last of the last of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    fluman, anti-angiogenic; prolactin; placental lactogen; LED; anglocenesis; growth hormone; hGH; hGH-V; capillary endothelial cell proliferation; placental vascularisation; pregnancy; treatment; andiogen; disease; tumour; thhibitor; malignant; angiofibrone; arreinovenous malformation; artificitis; atherosolerotic plaques; corneal arcit neovascularisation; wound healing; proliferative retinopathy; deciler decentation; trachment proliferation; quelitis; fracture; caler-weber synctome; psoriasis; libroplasia; scheroderic contacted; surcome; vascular addession; ulcor; leukalomia; reproductive disorder; contacted; returdation;

properties can be used for preventing or treating e.g. maignant tumours, any filterand, arteriovencies malformation, arthritic such as rheumatoid artifits, atterosciencic plaques, conneal graft mechasitation.

Glayed wound healing, proliferation, granulations such as those occurring the technopathy, macular degeneration, granulations such as those occurring in hemophilic joints, imappropriate vascularisation in wound healing such as hyperticipits scars or keloid scars, neovascular glaucoma, ocular tumour, uveitis, non-union fractures, Oslar-Weber syndrome, psoriasis, pyogenic glaucoma, retrolental fibroplasia, scleroderma, solid tumours, Kaposi's sarcoma, trachoma, vascular adhesions, chronic varioose ulcers, loukaemia, and reproductive disorders such as follicular and luteal cysts and choriocarcinoma. They can also be used as contraceptive agents. DNA encoding the peptides can be used in gene therapy. The measurement of abnormal levels of N-terminal fragments of health, hGH-V, prolactin or hPL can be used in assays for impairment of vascular development associated with pre-eclampsia, intrauterine growth retardation, and placental
                                                                                                                                                                                                                                                this invention describes novel human anti-angiogenic peptides derived from 10 to 150 consecutive amino acids selected from the N-terminal end of human publicents lattogen (hBL), human growth hormone (hBL), prowth hormone variant (hGH V), or human growth peptides (hB) growth hormone variant (hGH V), or human prolactin, such peptides (h) inhibit capillary endothelal cell proliferation and organisation (ii) inhibit capillary endothelal cell proliferation and organisation (ii) inhibit least one specific receptor which describes not bind an intact full length hGH, hPL, prolactic or hGH-V. The invention also describes a method for diagnosing a probable absormatity of placental vascularisation during prequency. The poptides can be used for treating an anglogenic disease in a subject, for inhibiting tumour lormation or growth in a patient or for modulating vascularisation of a patient's placenta. In particular, the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 MPPT1PLSRLFDNAMLRAHRIHQLAFDTYQEFERAYIPKEQKYSFLQNPQTSLSFSESIP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 \widehat{\Xi}
```

```
Figure growth cormone segment, used at the N-terminal of a fusion protein, which contains a thrombin recognition site, and human beta nerve growth factor (beta-NGF) at the C-terminal. Beta-NGF can be used to control geriatric dementia and other nervous disorders, and can be released from the fusion protein by incubation with thrombin (see AAN90577-8, AAP91034, AAP91299).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 MEPTIPESRIFONAMIRAHREHQEAFDIYQEFEBAYIPKEQKYSFLQNPQISESFSESIP 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence represents a chameric protein, which contains an N-terminal fragment of human growth hormone (h6H) of the sequence given in AAV42855, a cleavable peptide linker (AAV42857), and a human insulin precursor comprising insulin A and B chains (AAV42859). The h6H portion of the chimeric protein acts as an intranclecular chaperone (hKD) for the insulin precursor, enabling it to fold correctly. The cleavable peptide linker has a C-terminal Arg residue which enables the high portion of the chimeric protein to be removed after folding has taken place. Production of recombinant numan insulin with correctly inhed cystoine bridges with fewer necessary procedural steps, and mence resulting in a higher protein can provide himan insulin with correctly inhed cystoine bridges with fewer necessary procedural steps, and mence resulting in a higher protein can insulin. The INC sequences not only protein any approach is colubility of the fusion protein and decrease the intermolecular insulin sequences. From intracellular degradation by a microorganism isst, but also promete the folding of the fused insulin precursor. Facilitate the folding of the fused insulin precursor at commercially useful high concentrations. The reserve in the fused insulin precursor is commercially useful high concentrations. The sequence is the fused protein and decrease the intermolecular insulings and related purification science disvance of hydrophichte absorbent with a second containing the concentrations of nearcapten or the insect hydrophichte absorbent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 MPPTIPLSRLEDMAKLRAHBLACLARDTVORFBRAVIPKBOKYSBYGNPQTSLSPSBS1P +0

                                                                                                                                                                     Silver Calva
                                The invention consists of a vector conty, a fusion protein which is formed by ligating, downstream of a promotor, mSH or a derive (proteinmed by subtstin.) of Mot-14 with lou) and a foreign protein. Stability of the vector in the host is greatly increased so the protein yield is higher.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New auti-angiogenic peptides - comprise N-terminal fracments of

normal variant (naw, y), or numan protactin, such appliates (1) inhibit angiogenesis in chick choricallantoic membrane and (ii) binds to at least one specific receptor which does not bind an intract full, length city, prolactin or hGH-V. The invention also describes a method for diagnosing a probable abnormality of placental vascularisation during pregimency. The peptides can be used for treating an angiogenic disease in solubect, for inhibiting tumour formation or growth in a patient or for medulating vascularisation of a patient's placenta. In particular, the peptides can be used for treating e.g. malignant tumours, regional and vascularisation of aptent's placenta. In particular, the peptides can be used for treating e.g. malignant tumours, regional and real placents, anderesolatoric plaques, corneal grathitic such as rheumatoid artifitis, atherosolatoric plaques, corneal grathitic such as rheumatoid artifitis, atherosolatoric plaques, corneal grathitic such as those occurring of a trivitis, anderesolatoric plaques, corneal grathitic such as those occurring to relinopathy, macuiar degeneration, granulations such as those occurring such as hyportrophic scars or keloid scars, neovascular glaucoma, ocular timent, uveling macuiar degeneration, granulations such as those occurring such as hyportrophic scars or keloid scars, neovascular glaucoma, retrolental fibroplasia, scleroderma, solid tumours, kaposi's sarcoma. Trachoma, vascular adhesions, chronic varicose ulcers, neovalis the peptides can also be used as contraceptive agents of such development associated with pre-ediampsia, intrautering growth retardation, and placental can be used in assays for impairment of vascular development associated with pre-ediampsia, intrautering growth retardation, and placental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 MFPTIPLSRIFONAMLRAHRLHQLAFDTYQEFEEAYIPKEQKYSFLQNPQTSLSFSESIP 60

                                                                                                                        Fusion protein consisting of human growth hormone at the treminal end (1st region), a 3 amino acid sequence representing thrombin recognition site, and human beta nerve growth factor (beta-NGF) at the C-terminal. Beta-NGF can be used to control geriatus demontia and other nervous disorders, and can be released from the fusion protein by incubation with thrombin (see AAN90577-8, AAP91034, AAP91041).

                                                                                                                                                                                                                                                                                                                                               A recombinant human nerve growth factor beta subunit-contg, protein can be produced as this fusion protein. It is purified by contacting a gel having a cation exchange gp, with the fusion protein, in the presence of urea. The purified protein is useful in a medicament for treating disorders of the nervous system, eg dementia.

                                                                                                                                                                                                                                                                                                                                                                                                      ò
```

```
The polypeptide (AAPB1226) with somatomedin-like activity and the DNA (AANB1605) encoding it are claimed. A Met resicual qp. may be added to the W.terminal. The polypeptide acts on the hone structure of mammals, including humans, to promote bone growth. The polypeptide has high production rate and is casily extracted from bacterial culture medium and refined for use as a bone growth accelerator. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                 The protein is a direct translation of the upstream tryptophan promoter-operator lacking its attenuation sequence and human abder-NGF sequence. The product may be efficiently expressed from a transformed E.coli expression system.
                                                                                                                                                                                                                                                                                                                                                                                                                    ..

This sequence represents a protein of the serum albumin-greath hormone.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Serum albumin-growth hormone fusion protein - useful to treat growth hormone related diseases, e.g. Down's syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       97.9%: Score 460: DB 19: Length 191: 98.9%: Pred. The tagging may consist of one or more substitutions in tagged growth hormone selected from 340V, 52V, w86F, Y, L, I or V P103Y or 1137Y. The method is used to distinguish between exogenously administered substances as compared to naturally-occurring endogenous substances. Especially menthoned is the integral manually exogenous substances by attlactes or in domesticated farm animals e.g. cattle. The present sequence represents mainly forwith hormone which may be used

The present invention describes a human arowth housone mitten is which the 134th Arg and the 135th Thr are replaced respectively by Asp and Brothn the 15 to the 191st amino acid sequence in thatural type human 22 king growth hormone (Adi) and which has a resistance analyst decomposition by thrombin. The present sequence represents the natural BSH. Also and the 143th Lys are replaced respectively Asp. Pro and A.a in the amino acid sequence of matural type hill and which has a resistance amino acid sequence of matural type hill and which has a resistance against decomposition by thrombin and plasmin; and (2) a ding preparation containing the above holl mand as the active component. The mutant hill shows an activity approximately expiration to that of natural type hill and shows a high stability in blood and body finid.
                                                                                                                                                                                                                            A human growth hormone mutable with equivalent activity to natural human growth hormone
                                                                                                                                                                                                                                                                                      Example 1; Page 5:6; 10pp; Japanese.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   \stackrel{>}{\circ}
somatotropin 2 precursor - human
Nationate names growth hormone 2; growth hormone variant, 58H-V; placental sumutified
N/Alternate names growth hormone 2; growth hormone variant, 58H-V; placental sumutified
C/Species: Homo sapiens (man)
C/Species: A 479-492, 1889
A/Hitle: The human growth hormone locus: mucrocide sequence, biology, and evolution:
A/Reference number: A32435, MUID:89307277; PMID:244766
